COLOR DOPPLER / DUPLEX ULTRASOUND REPORT

Right Lower Limb Arterial Study

Patient Details

Patient Name Ms. Nisha Acharya
Age / Sex 46 Years / Female
Patient ID 632744

Referral / Exam

Referring Doctor Dr. S. Patel
Examination Date 18-02-2024

Technique

Duplex evaluation of the right lower limb arteries was performed using B-mode, Color and Spectral Doppler imaging. Peak systolic velocities (PSV) and waveform patterns were analyzed in inguinal arterial segments — Common Femoral, Profundus Femoris, Superficial Femoral (SFA), Popliteal and Tibial arteries.

Findings — Right Lower Limb

Artery	PSV (cm/s)	Waveform	Remarks
Common Femoral Artery	58	Monophasic	Poor distal perfusion and dampened flow.
Profundus Femoris	48	Monophasic	Poor distal perfusion and dampened flow.
Proximal Superficial Femoral Artery	73	Monophasic	Poor distal perfusion and dampened flow.
Mid SFA	64	Monophasic	Poor distal perfusion and dampened flow.
Distal SFA	80	Monophasic	Poor distal perfusion and dampened flow.
Popliteal Artery	47	Monophasic	Poor distal perfusion and dampened flow.
Peroneal / Posterior Tibial Artery	80	Monophasic	Poor distal perfusion and dampened flow.
Anterior Tibial Artery	73	Monophasic	Poor distal perfusion and dampened flow.

Ankle—Brachial Index (ABI)

ABI: 0.36

Impression

- Diffuse monophasic waveforms in multiple arterial segments with markedly reduced ABI.
- Findings consistent with hemodynamically significant Peripheral Arterial Disease (PAD).

Dr. A. K. Mehta, M.D. (Radiology)
Consultant Vascular Radiologist
