COLOR DOPPLER / DUPLEX ULTRASOUND REPORT

Right Lower Limb Arterial Study

Patient Details

Patient Name Mrs. Kavita Rao
Age / Sex 58 Years / Female
Patient ID 541267

Referral / Exam

Referring Doctor Dr. R. Deshmukh
Examination Date 25-10-2022

Technique

Duplex evaluation of the right lower limb arteries was performed using B-mode, Color and Spectral Doppler imaging. Peak systolic velocities (PSV) and waveform patterns were analyzed to assess arterial patency and flow characteristics.

Findings — Right Lower Limb

Artery	PSV (cm/s)	Waveform	Remarks
Common Femoral Artery	115	Triphasic	Normal flow pattern.
Profundus Femoris	98	Biphasic	Mild wall thickening noted.
Proximal Superficial Femoral Artery	128	Biphasic	Slight spectral broadening; early plaque formation.
Mid SFA	95	Biphasic	Flow maintained with minor velocity drop.
Distal SFA	88	Biphasic	Slightly reduced amplitude; no occlusion visualized.
Popliteal Artery	76	Biphasic	Low-end normal flow; mild turbulence.
Posterior Tibial Artery	68	Biphasic	Reduced pulsatility but maintained forward flow.
Anterior Tibial Artery	70	Biphasic	Subtle waveform flattening distally.

Ankle—Brachial Index (ABI)

ABI: 0.78

Impression

- Predominantly biphasic waveforms with minor PSV reduction in distal arterial segments.
- Mild diffuse atherosclerotic changes without significant stenosis or occlusion.

Dr. A. K. Mehta, M.D.
Consultant Vascular Radiologist
