COLOR DOPPLER / DUPLEX ULTRASOUND REPORT

Right Lower Limb Arterial Study

Patient Details

Patient Name Mr. Aarav Patel
Age / Sex 83 Years / Male
Patient ID 453859

Referral / Exam

Referring Doctor Dr. S. Patel
Examination Date 18-02-2024

Technique

Duplex evaluation of the right lower limb arteries was performed using B-mode, Color and Spectral Doppler imaging. Peak systolic velocities (PSV) and waveform patterns were analyzed.

Findings — Right Lower Limb

Artery	PSV (cm/s)	Waveform	Remarks
Common Femoral Artery	90	Biphasic	Reduced amplitude; mild atherosclerotic change.
Profundus Femoris	79	Biphasic	Mild plaque; subtle spectral broadening.
Proximal Superficial Femoral Artery	75	Monophasic	Focal narrowing with reduced systolic peak.
Mid SFA	87	Monophasic	Dampened waveform consistent with downstream disease.
Distal SFA	66	Biphasic	Low velocity but preserved biphasic pattern.
Popliteal Artery	86	Biphasic	Reduced amplitude; mild post-stenotic turbulence.
Peroneal / Posterior Tibial Artery	75	Monophasic	Poor distal perfusion; reduced pulsatility.
Anterior Tibial Artery	73	Biphasic	Calcific segments limiting visualization; low PSV.

Ankle—Brachial Index (ABI)

ABI: 0.63

Impression

- Reduced PSVs in multiple arterial segments with mixed biphasic and monophasic waveforms.
- Findings consistent with peripheral arterial narrowing and impaired distal perfusion.

Dr. A. K. Mehta, M.D.
Consultant Vascular Radiologist
